PROFESSIONAL SUMMARY

Full-Stack Software Engineer with **2.5+** years building **SaaS platforms, ERP systems, and multi-tenant** applications using Node.js, .NET, Angular and PostgreSQL. Specializes in backend architecture - Clean Architecture, **CQRS**, event-driven systems, and **RBAC** with end-to-end ownership from domain modeling to **VPS deployment**.

PROFESSIONAL EXPERIENCE

Sidago Inc 🔗, *Full-Stack Developer*

Feb 2026 – Present
Chicago, USA | Remote

- Architected **Mazarini** 🔗, a headless **CMS** platform built with Strapi, Next.js, and TypeScript in a monorepo architecture, delivering **10+** configurable content modules for business clients.
- Engineered interactive UI components (mega menus, animated hero sections, touch-enabled carousels) using **Framer Motion** and Tailwind CSS.
- Containerized and deployed the full stack with Docker (PostgreSQL, Nginx), achieving full dev/production environment parity
- Implemented technical **SEO** pipeline — dynamic metadata, sitemap.xml, robots.txt
- **Technologies:** Next.js, Strapi, TypeScript, PostgreSQL, Docker, Nginx, Tailwind CSS, Framer Motion

Bizreflex 🔗, *Junior Software Engineer*

Jul 2025 – Jan 2026 | Dhaka, Bangladesh

- Developed **10+** REST API endpoints for **TekomoPro**, a technician marketplace platform managing the full work order lifecycle, using NestJS and PostgreSQL
- Implemented event-driven service communication with **RabbitMQ and NATS**, decoupling 3 core services and enabling asynchronous **webhook** processing for third-party integrations
- Optimized Order Service query patterns (indexing, N+1 elimination, schema normalization), improving API response time by **~30%** under production load
- Integrated **AWS S3** for file storage, replacing local disk storage and enabling the service to scale horizontally without state concerns
- **Technologies:** NestJS, Angular, PostgreSQL, RabbitMQ, Knex, NATS, AWS S3

Bright Technology Limited 🔗, *Junior Software Engineer*

Jan 2024 – Jun 2025 | Dhaka, Bangladesh

- Designed and built a **multi-tenant ISP management SaaS platform** serving multiple internet service providers with company-level data isolation and role-based access control
- Integrated **MikroTik RouterOS API** for PPPoE user provisioning, bandwidth throttling, and real-time network monitoring, automating 80%+ of previously manual ISP operations
- Built an automated billing and renewal engine using cron jobs with multi-payment support, including **bKash mobile payment integration** processing thousands of monthly transactions
- Secured the platform with JWT authentication, bcrypt hashing, Swagger documentation, and a modular **RBAC** system across all API surfaces
- **Technologies** - Node.js, Express.js, TypeScript, MongoDB, Mongoose, JWT, Docker, Swagger, MikroTik API, bKash API

PROJECTS

POS & Inventory Management System 🔗

- Architected a **15-module ERP** platform (Sales, Purchasing, Inventory, POS, Payments, Reports) using **Clean Architecture** (4 layers) and CQRS with MediatR.
- Implemented **ledger-based inventory** with an append-only InventoryTransaction table and materialized StockBalance view — eliminating race conditions and enabling full audit trails.
- Built **RBAC + ABAC** authorization: 25 permissions, 4 roles, warehouse-scoped access in JWT claims, enforced via a custom RequirePermission attribute.
- Engineered an **offline-first POS terminal** with Dexie.js — queues sales in IndexedDB during outages, auto-syncs on reconnect.
- PostgreSQL **Row-Level Security** via **EF Core** interceptor, and global tenant query filters.
- **Technologies:** ASP.NET Core 10, C#, Angular 21, PostgreSQL 18, Docker, MediatR

SKILLS

- **Languages** — C, C++, C#, JavaScript, TypeScript, Python.
- **Backend** — ASP.NET Core, Node.js, NestJS, Express.js
- **Frontend** — React, Angular, Tailwind CSS, Bootstrap
- **Database Management** — MySQL, PostgreSQL, MongoDB
- **Architecture** — Clean Architecture, CQRS, Domain-Driven Design, Multi-tenancy, Event-Driven
- **DevOps** — Docker, Nginx, Linux VPS, PM2, GitHub Actions, AWS (EC2, S3)
- **Core Concepts** — REST APIs · Microservices · ERP Systems · SaaS Architecture · Authentication & Authorization · Payment Integration · Background Jobs · Event-driven Systems

EDUCATION

BSc in Computer Science and Engineering, *Comilla University*

Jan 2018 – Dec 2023
Cumilla, Bangladesh

CGPA - 3.21 / 4.00

ACHIEVEMENTS

Solve more than 1100 problems on various online judges.

- Codeforces: 700+
- Leetcode: 200+
- Toph: 150+
- UVA: 50+
- LightOj: 70+

SYSTEM DESIGN AND BACKEND ENGINEERING WITH AWS,
Poridhi

Apr 2024 – Dec 2025

**Ranked 20th in RMSTU Bangabandhu Online divisional
Programming Contest.**

Jul 2022

**Ranked 8th in Comilla University CSE Fiesta Programming
Contest**

Jan 2022
